

Exhibit VI-14 Discounted Estimates of Corrective Actions (three percent discount rate)

Notes: X-axis begins at Year 4 after rule promulgation, which is the first year of full implementation of the RTCR and/or Alternative option. The annual rates of corrective actions as predicted by the model reach a steady state beginning in approximately Year 9, by which time PWSs that are expected to meet the criteria for reduced monitoring begin reduced monitoring, and the distribution of PWSs that monitor monthly, quarterly, and annually is assumed to remain relatively constant. All corrective actions performed are in addition to activity under the 1989 TCR, which does not require corrective actions. Therefore the 1989 TCR is not included in this graph.
